Notes:

On site 10:21, SW wind at 8 mph, 43 degrees, mostly clear. Digital photographs collected. There is still evidence of oil on well pad. Spray escaped the northeast corner and impacted area off pad 35 X 40 yards. Impact area is a stubble field with 70-plus percent cover. Spray was fine, causing little to no impact to soil. Anticipate complete attenuation of petroleum through natural processes. Will need to check next spring to ensure that there is no residual impact to small grain field. Off site 10:41.
